Practical - 15

WEB DEVELOPMENT FRAMEWORKS (ITUE203)

SEMESTER: 3RD, 2026-27

ID: 25DCE110

Practical Title: Final Integration, Testing, Documentation, GitHub Submission, and Local Deployment

Integrate all modules into a single deployable StudentHub portal. Verify navigation, responsiveness, authentication, database operations, security checks, AJAX functionality, and documentation. Deploy locally using XAMPP/Apache virtual host and submit GitHub repository.

Theory

Answers to key questions

1. Are all pages properly linked and navigable?

Yes. Navigation links are tested to ensure users can move between the homepage, registration, login, dashboards, events, and other pages.

2. Are sessions, roles, validations, and database operations working end-to-end?

Yes. Registration, login, logout, role-based access, form validation, and database operations are tested together.

3. Are security and accessibility checklists completed?

The project should be checked for prepared statements, password hashing, session protection, input validation, accessible form labels, keyboard navigation, and appropriate error messages.

4. Is project documentation sufficient for installation and testing?

Yes. A README should explain the project, technologies, setup steps, database import, login flow, and testing procedure.

5. Is the project repository clean and properly committed?

Yes. Source code, SQL files, and documentation should be organized and committed to GitHub. Passwords, database credentials, and unnecessary generated files should not be committed.

Implementation/ Output/Result

Tags:

Example:

git init

git add .

git commit -m "Complete StudentHub project"

git branch -M main

git remote add origin YOUR_GITHUB_REPOSITORY_URL

git push -u origin main

Readme instructions:

StudentHub

Technologies

- HTML, CSS and JavaScript

- PHP

- MySQL

- XAMPP

Setup

1. Copy the project into the XAMPP htdocs folder.
2. Start Apache and MySQL.
3. Import the database SQL file using phpMyAdmin.
4. Configure the database connection.
5. Open http://localhost/Webdev/HTML/firstpage.html
6. Test registration, login, dashboards and logout.

Implementation

1. Integrated all StudentHub modules into one project.
2. Tested navigation links and page responsiveness.
3. Tested registration, login, logout, sessions, and role permissions.
4. Verified database insert, select, update, and delete operations.
5. Tested input validation and error handling.
6. Checked security and accessibility requirements.
7. Prepared the SQL database dump and README documentation.
8. Committed the project to GitHub.
9. Tested local deployment using XAMPP and Apache.

Learning Outcomes:

Learned to integrate, test, document, version-control, and deploy a complete full-stack web application locally.
