Practical Title: Semantic HTML5 Pages with Accessibility-Ready Structure

Develop static HTML5 skeletons for at least 10 StudentHub pages such as Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, FAQ, and Feedback. Use semantic tags and accessibility-friendly structure.

A. Theory

1. Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?

No. In the provided HTML code, **semantic tags such as <header>, <nav>, <main>, <section>, <article>, <aside>, and <footer> are not used properly**. Most of the page structure is created using <div>, <table>, <h1>–<h4>, and <p> tags. For example, the navigation links could be placed inside <nav>, the main page content inside <main>, related side content inside <aside>, and bottom links such as FAQ, Feedback, and About inside <footer>. Therefore, the pages work, but they could be improved by using semantic HTML tags for better structure, accessibility, and readability.

2. Are form labels, headings, image alt text, and navigation links accessible?

Partially. The headings and navigation links are generally accessible because clear headings such as <h1>, <h2>, and <h3> are used, and navigation is provided through <a> links. The image has an alt attribute (alt="Login"), which is good for accessibility. However, the form labels are not fully accessible because some <input> elements do not have properly associated <label> elements using matching for and id attributes. Therefore, the website has some accessibility features, but the forms should be improved by properly connecting labels with their input fields.

3. Is the page structure consistent across all pages?

Yes, the page structure is mostly consistent across all pages. Most pages use a similar layout with headings, horizontal lines, content sections, navigation links, and footer links such as FAQ, Feedback, and About. The pages also use external CSS files for styling. However, the structure is not completely consistent because some pages use tables for layout, while others use forms, lists, or simple paragraphs, and semantic HTML elements such as <header>, <nav>, <main>, and <footer> are not consistently used.

B. Implementation/ Output/Result

CHARUSAT University

Departments

- Computer Engineering
- Information Technology
- Mechanical Engineering
- Civil Engineering
- Electronics and Communication Engineering
- Electrical Engineering
- Pharmacy
- Computer Applications
- Management Studies
- Science and Humanities

Faculty of Technology and Engineering

CHARUSAT provides various engineering programs with modern laboratories, experienced faculty members and research opportunities.

Faculty of Pharmacy

The pharmacy department focuses on pharmaceutical education, research and innovation.

Faculty of Management Studies

The management department offers courses related to business, finance and administration.

About:

About CHARUSAT

Charotar University of Science and Technology (CHARUSAT) is a premier institution committed to excellence in higher education, research, innovation, and community development. Established with the vision of transforming society through quality education, the university offers a wide range of undergraduate, postgraduate, and doctoral programs across disciplines including engineering, technology, pharmacy, management, computer applications, sciences, nursing, and allied health sciences. At CHARUSAT, students benefit from an industry-oriented curriculum, experienced faculty, modern laboratories, advanced research facilities, and a vibrant campus environment that encourages academic excellence and personal growth. The university emphasizes innovation, entrepreneurship, ethical values, and lifelong learning, preparing graduates to excel in their careers and contribute meaningfully to society. Through strong industry collaborations, research initiatives, and global partnerships, CHARUSAT continues to empower students with the knowledge, skills, and confidence needed to succeed in an ever-evolving world.

C. GitHub Repository Link:

<https://github.com/kanan2007s-sys/Web-development-/tree/main>

D. Challenges Faced:

The main challenge was to use the correct HTML tag and implement it. I couldn't find the html tags and sometimes not get the attribute to be used.

E. Learning Outcomes:

I learned how to use HTML tags and their attributes to create a website.
