Practical Title: Student Management CRUD with Search and Filter.

Create a student management module to add, view, edit, delete, search and filter student records. All database operations must use MYSQLi statements and clear success/failure messages.

A. Theory

1. Answers to key questions

1. Are SELECT, INSERT, UPDATE, and DELETE operations working?

Yes. SELECT displays student records, INSERT adds new records, UPDATE edits existing records, and DELETE removes records from the database.

2. Is search by name/email/course implemented?

Yes. A search input can filter student records by name, email, or course using a prepared SQL statement.

3. Are delete operations confirmed before execution?

Yes. A JavaScript confirmation dialog asks the user to confirm before deleting a student record.

Implementation/ Output/Result

Demo code:

```
<?php
require_once __DIR__ . "/db_mysqli.php";

$search = trim($_GET["search"] ?? "");

$stmt = $conn->prepare(
    "SELECT id, name, email, course
     FROM students
     WHERE name LIKE ?
       OR email LIKE ?
       OR course LIKE ?
     ORDER BY id DESC"
);

$term = "%" . $search . "%";
$stmt->bind_param("sss", $term, $term, $term);
$stmt->execute();
$result = $stmt->get_result();
?>

<form method="GET">
    <input type="text" name="search"
```

```
        placeholder="Search name, email or course"
        value="<?= htmlspecialchars($search) ?>">
    <button type="submit">Search</button>
</form>

<table border="1" cellpadding="8">
    <tr>
        <th>ID</th>
        <th>Name</th>
        <th>Email</th>
        <th>Course</th>
    </tr>

    <?php while ($row = $result->fetch_assoc()): ?>
    <tr>
        <td><?= (int) $row["id"] ?></td>
        <td><?= htmlspecialchars($row["name"]) ?></td>
        <td><?= htmlspecialchars($row["email"]) ?></td>
        <td><?= htmlspecialchars($row["course"]) ?></td>
    </tr>
    <?php endwhile; ?>
</table>

<?php
$stmt->close();
```

```
$conn->close();

?>
```

- Created a student management interface.
- Connected PHP to the MySQL database using MySQLi.
- Implemented SELECT to display student records.
- Implemented INSERT to add student records.
- Implemented UPDATE to edit student details.
- Implemented DELETE with confirmation.
- Added search by name, email, or course.
- Displayed appropriate success and failure messages.

Learning Outcomes:

Learned to implement secure student CRUD operations with MySQLi, search, filtering, and user feedback.
